Physical & Political Divisions of the World

1. **Which of the following mountain ranges acts as a natural boundary between Europe and Asia?**

   A) Alps

   B) Himalayas

   C) Urals

   D) Andes

   Answer: C

   Rationale: The Ural Mountains run through western Russia and are traditionally considered the boundary between the two continents.

2. **The "Grand Banks," one of the world's richest fishing grounds, is located off the coast of:**

   A) Norway

   B) Newfoundland (Canada)

   C) Japan

   D) Peru

   Answer: B

   Rationale: The meeting of the warm Gulf Stream and the cold Labrador Current creates ideal conditions for plankton, supporting vast fish populations.

3. **Which landlocked country is known as the "Heart of South America"?**

   A) Bolivia

   B) Paraguay

   C) Ecuador

   D) Uruguay

   Answer: B

   Rationale: Paraguay is centrally located and lacks direct access to the sea, earning it this nickname.

4. **The Katanga Plateau, famous for its copper and uranium deposits, is located in:**

   A) South Africa

   B) Democratic Republic of Congo

   C) Australia

   D) Brazil

Answer: B

Rationale: This region in the DRC is one of the world's most mineral-rich areas.

5. **Which strait separates the Malay Peninsula from the Indonesian island of Sumatra?**

   A) Strait of Hormuz

   B) Strait of Malacca

   C) Bering Strait

   D) Sunda Strait

   Answer: B

   Rationale: The Strait of Malacca is a vital maritime choke point connecting the Indian Ocean to the Pacific Ocean.

6. **The Atacama Desert, the driest non-polar place on Earth, is caused by:**

   A) The Rain Shadow of the Alps

   B) The cold Humboldt Current

   C) Its proximity to the Equator

   D) High-pressure systems in the Sahara

   Answer: B

   Rationale: The cold Humboldt current prevents moisture from reaching the coast, combined with the rain shadow effect of the Andes.

7. **In terms of political divisions, which is the world's smallest sovereign state by both area and population?**

   A) Monaco

   B) Nauru

   C) Vatican City

   D) San Marino

   Answer: C

   Rationale: Vatican City covers roughly 44 hectares and is an enclave within Rome.

8. **The 'Great Dividing Range' is the primary topographical feature of which continent?**

   A) North America

   B) Africa

C) Australia

D) Antarctica

Answer: C

Rationale: It runs parallel to the east coast of Australia and influences the continent's climate significantly.

9. **Which sea is surrounded by three continents: Europe, Africa, and Asia?**

   A) Caspian Sea

   B) Red Sea

   C) Mediterranean Sea

   D) Caribbean Sea

   Answer: C

   Rationale: It is bounded by Europe to the north, Africa to the south, and Asia (Levant region) to the east.

10. **The 'Ring of Fire' is a major area in the basin of the Pacific Ocean where many earthquakes and volcanic eruptions occur. Which plate movement primarily causes this?**

    A) Divergent plate boundaries

    B) Subduction of oceanic plates

    C) Transform faulting

    D) Continental drifting

    Answer: B

    Rationale: The subduction of various plates under the Pacific plate creates high tectonic activity.

11. **Which African country is the only one to have coasts on both the Atlantic and Mediterranean?**

    A) Egypt

    B) Libya

    C) Morocco

    D) Algeria

    Answer: C

    Rationale: Morocco sits at the northwest corner of Africa, bordering the Atlantic to the west and the Mediterranean to the north.

12. **The "Great Rift Valley" is a continuous geographic trench running from Lebanon to:**

    A) South Africa

B) Mozambique

C) Nigeria

D) Ethiopia

Answer: B

Rationale: It extends approximately 6,000 kilometers from Western Asia to Southeast Africa.

13. **Which is the largest island in the world (excluding continents)?**

A) Borneo

B) Madagascar

C) Greenland

D) New Guinea

Answer: C

Rationale: Greenland is an autonomous territory of Denmark and is the largest non-continental island.

14. **The Pampa grasslands are found in which country?**

A) USA

B) Argentina

C) Hungary

D) South Africa

Answer: B

Rationale: The Pampas are fertile South American lowlands primarily located in Argentina.

15. **Which country is known as the "Land of a Thousand Lakes"?**

A) Norway

B) Canada

C) Finland

D) Switzerland

Answer: C

Rationale: Finland has approximately 188,000 lakes.

16. **The '49th Parallel' is the boundary between:**

A) North and South Korea

B) USA and Canada

C) Vietnam and China

D) Egypt and Sudan

Answer: B

Rationale: It forms a significant portion of the international border between the United States and Canada.

17. **Which is the deepest lake in the world?**

A) Lake Superior

B) Lake Victoria

C) Lake Baikal

D) Lake Tanganyika

Answer: C

Rationale: Located in Siberia, Russia, Lake Baikal is the deepest and oldest freshwater lake.

18. **The 'Steppes' are the temperate grasslands of:**

A) North America

B) Eurasia

C) South Africa

D) Australia

Answer: B

Rationale: The Steppes extend from Eastern Europe to Central Asia.

19. **Which city is known as the "City of Seven Hills"?**

A) Athens

B) Rome

C) Paris

D) Istanbul

Answer: B

Rationale: Ancient Rome was built on seven hills east of the Tiber River.

20. **The 'Death Valley' is located in which desert?**

A) Gobi

B) Mojave

C) Sonoran

D) Thar

Answer: B

Rationale: Death Valley in California is part of the Mojave Desert and is one of the hottest places on Earth.

21. **Which country has the longest coastline in the world?**

A) Russia

B) Australia

C) Canada

D) Indonesia

Answer: C

Rationale: Canada's coastline is over 202,000 km long due to its numerous islands.

22. **The 'Horn of Africa' consists of which group of countries?**

A) Egypt, Sudan, Libya

B) Ethiopia, Eritrea, Djibouti, Somalia

C) Kenya, Tanzania, Uganda

D) Nigeria, Ghana, Togo

Answer: B

Rationale: These countries form the peninsula in Northeast Africa that juts into the Arabian Sea.

23. **Which river crosses the Equator twice?**

A) Amazon

B) Nile

C) Congo

D) Mississippi

Answer: C

Rationale: The Congo River's course takes it across the equator in both northern and southern directions.

24. **The 'Llanos' are tropical grasslands found in:**

A) Brazil

B) Venezuela and Colombia

C) Argentina

D) Australia

Answer: B

Rationale: They are vast tropical grassland plains situated to the east of the Andes.

25. **The 'Iberian Peninsula' is occupied by which two main countries?**

A) France and Italy

B) Norway and Sweden

C) Spain and Portugal

D) Greece and Turkey

Answer: C

Rationale: Spain and Portugal occupy the bulk of this peninsula in southwestern Europe.

Part 2: Physical & Political Divisions of India

26. **Which latitude passes through the center of India?**

A) Equator

B) Tropic of Capricorn

C) Tropic of Cancer

D) Arctic Circle

Answer: C

Rationale: The Tropic of Cancer (23.5° N) passes through 8 Indian states.

27. **The 'Kanchenjunga' peak is located in which Indian state?**

A) Uttarakhand

B) Himachal Pradesh

C) Sikkim

D) Arunachal Pradesh

Answer: C

Rationale: It is the third highest mountain in the world and lies on the border between Sikkim and Nepal.

28. **The "Duncan Passage" separates:**

A) North and Middle Andaman

B) South Andaman and Little Andaman

C) Car Nicobar and Little Nicobar

D) Lakshadweep and Maldives

Answer: B

Rationale: This strait in the Indian Ocean separates the main South Andaman from the Little Andaman island.

29. **Which is the oldest fold mountain range in India?**

A) Himalayas

B) Aravallis

C) Western Ghats

D) Satpuras

Answer: B

Rationale: The Aravalli Range is one of the oldest geological features in the world, predating the Himalayas.

30. **The 'Chota Nagpur Plateau' is famous for its concentration of:**

A) Alluvial soil

B) Mineral resources

C) Desert flora

D) Coffee plantations

Answer: B

Rationale: It is known as the "Ruhr of India" due to its rich deposits of coal, iron ore, and mica.

31. **Which river is known as the "Dakshin Ganga"?**

A) Krishna

B) Kaveri

C) Godavari

D) Narmada

Answer: C

Rationale: Due to its large size and span, the Godavari is often called the South Ganges.

32. **The 'Palghat Gap' connects which two states?**

    A) Tamil Nadu and Kerala

    B) Maharashtra and Gujarat

    C) Karnataka and Andhra Pradesh

    D) Sikkim and West Bengal

    Answer: A

    Rationale: It is a major break in the Western Ghats mountain range, facilitating trade between Kerala and Tamil Nadu.

33. **The 'Indian Standard Time' (IST) is calculated based on which meridian?**

    A) 80° E

    B) 82.5° E

    C) 85° E

    D) 90° E

    Answer: B

    Rationale: The $82^{\circ} 30'$ E longitude passing through Mirzapur (UP) is taken as the standard meridian.

34. **Which state has the longest coastline in India?**

    A) Andhra Pradesh

    B) Maharashtra

    C) Gujarat

    D) Tamil Nadu

    Answer: C

    Rationale: Gujarat has a coastline of about 1,600 km, the longest among all states.

35. **The 'Malabar Coast' refers to the coastline of which state?**

    A) Goa

    B) Karnataka

    C) Kerala

    D) Odisha

Answer: C

Rationale: The southwestern coast of India, primarily in Kerala, is known as the Malabar Coast.

36. **Which channel separates the Andaman Islands from the Nicobar Islands?**

A) 8 Degree Channel

B) 9 Degree Channel

C) 10 Degree Channel

D) English Channel

Answer: C

Rationale: The 10 Degree Channel lies on the 10-degree line of latitude north of the equator.

37. **The 'Luni' river, which flows through Rajasthan, ends in:**

A) Arabian Sea

B) Gulf of Khambhat

C) Rann of Kutch

D) Lake Sambhar

Answer: C

Rationale: Luni is an endorheic river that disappears into the marshy lands of the Rann of Kutch.

38. **The highest peak in the South India (Peninsular India) is:**

A) Doddabetta

B) Anamudi

C) Mahendragiri

D) Guru Shikhar

Answer: B

Rationale: Anamudi, located in Kerala, is the highest peak in the Western Ghats and South India.

39. **The 'McMahon Line' forms the boundary between India and:**

A) Pakistan

B) China

C) Myanmar

D) Bhutan

Answer: B

Rationale: It is the effective boundary between China and India, specifically in the eastern sector.

40. **Which Indian state is surrounded by Bangladesh on three sides?**

A) Meghalaya

B) Mizoram

C) Tripura

D) West Bengal

Answer: C

Rationale: Tripura shares a long international border with Bangladesh on its north, west, and south.

41. **The 'Deccan Trap' region is characterized by:**

A) Alluvial soil

B) Red soil

C) Black soil (Regur)

D) Laterite soil

Answer: C

Rationale: Formed by volcanic eruptions, this region is famous for black soil, which is excellent for cotton cultivation.

42. **The 'Zoji La' pass connects:**

A) Srinagar and Leh

B) Shimla and Tibet

C) Sikkim and Lhasa

D) Arunachal and Myanmar

Answer: A

Rationale: It is a high mountain pass in the Himalayas at the junction of the Kashmir Valley and Ladakh.

43. **Which is the largest fresh water lake in India?**

A) Chilika Lake

B) Wular Lake

C) Dal Lake

D) Pulicat Lake

Answer: B

Rationale: Located in Jammu & Kashmir, Wular Lake is the largest freshwater lake in India.

44. **The 'Indira Point,' the southernmost point of Indian territory, is located in:**

A) Kanyakumari

B) Lakshadweep

C) Great Nicobar

D) Little Andaman

Answer: C

Rationale: While Kanyakumari is the southernmost point of the mainland, Indira Point in the Nicobar Islands is the southernmost point of the country.

45. **Which river system forms the 'Majuli' island, the largest river island in the world?**

A) Ganga

B) Brahmaputra

C) Indus

D) Godavari

Answer: B

Rationale: Majuli is located in the Brahmaputra River in Assam.

46. **The 'Barren Island,' India's only active volcano, is situated in:**

A) Lakshadweep

B) Andaman Islands

C) Nicobar Islands

D) Gulf of Mannar

Answer: B

Rationale: It is located in the Andaman Sea.

47. **The 'Saddel Peak' is the highest peak of:**

A) Lakshadweep

B) Andaman and Nicobar

C) Himachal Pradesh

D) Nagaland

Answer: B

Rationale: Located in North Andaman, it is the highest point in the archipelago.

48. **In which state is the 'Jog Falls' located?**

A) Kerala

B) Maharashtra

C) Karnataka

D) Tamil Nadu

Answer: C

Rationale: Jog Falls, created by the Sharavathi River, is one of the highest plunge waterfalls in India.

49. **The 'Radcliffe Line' is the international border between:**

A) India and China

B) India and Pakistan

C) India and Nepal

D) India and Myanmar

Answer: B

Rationale: It was the boundary line determined during the partition of India in 1947.

50. **Which Indian state shares its borders with the maximum number of other states?**

A) Madhya Pradesh

B) Uttar Pradesh

C) Assam

D) Maharashtra

Answer: B

Rationale: Uttar Pradesh shares its borders with 8 states and 1 Union Territory (Delhi).

Question 1 (Moderate)

Which of the following is the correct longitudinal arrangement of the Himalayan ranges from North to South?

A) Himachal, Himadri, Shiwaliks

B) Himadri, Himachal, Shiwaliks

C) Shiwaliks, Himachal, Himadri

D) Himadri, Shiwaliks, Himachal

Answer: B

Explanation:

- **Correct:** The **Himadri** (Great Himalayas) is the northernmost and highest range. To its south lies the **Himachal** (Lesser Himalayas), and the southernmost outer range is the **Shiwaliks**.
- **Incorrect:** Options A, C, and D disrupt this geographical sequence. The Shiwaliks are the youngest and lowest, always forming the southern boundary of the mountain system.

Question 2 (Difficult)

The "Malwa Plateau," which forms a significant part of the Central Highlands, is characterized by which of the following drainage patterns?

A) All rivers flow towards the Arabian Sea.

B) It is an endorheic basin with no outlet to the sea.

C) Most rivers, like Chambal and Betwa, flow towards the North-East to join the Yamuna.

D) It is drained exclusively by the Narmada and Tapti rivers.

Answer: C

Explanation:

- **Correct:** The Malwa Plateau tilts towards the North-East. Consequently, major rivers like the **Chambal, Sind, Betwa, and Ken** flow in that direction to join the Ganga-Yamuna system.
- **Incorrect:** Narmada and Tapti (Option D) flow in rift valleys to the south of this plateau. Most peninsular rivers flow east, but the specific "Central Highland" drainage is directed toward the northern plains (Option A is wrong).

Question 3 (Easy)

Which physiographic division of India is geologically the oldest and most stable landmass?

A) The Northern Mountains

B) The Northern Plains

C) The Peninsular Plateau

D) The Coastal Plains

Answer: C

Explanation:

- **Correct:** The **Peninsular Plateau** is part of the ancient Gondwanaland. It is composed of old crystalline, igneous, and metamorphic rocks and has remained largely stable for millions of years.
- **Incorrect:** The Himalayas (Option A) and the Northern Plains (Option B) are much younger, formed during the tertiary and quaternary periods respectively.

Question 4 (Moderate)

The "Bhabar" region, located at the foot of the Shiwaliks, is known for which of the following characteristics?

A) Dense forests and marshy wildlife habitats.

B) Highly fertile land ideal for intensive agriculture.

C) Disappearance of streams due to high porosity of pebbles.

D) Saline soil unsuitable for any vegetation.

Answer: C

Explanation:

- **Correct:** The **Bhabar** is a narrow belt (8 to 16 km wide) where rivers descending from mountains deposit heavy pebbles. The water often flows underground through these pebbles, making the surface stream "disappear."
- **Incorrect:** Option A describes the **Terai** region. Option B describes the **Bhangar** or **Khadar** plains. Bhabar is generally too rocky for traditional farming.

Question 5 (Difficult)

Consider the Western Ghats and Eastern Ghats. Which statement is correct regarding their physiography?

A) The Eastern Ghats are higher and more continuous than the Western Ghats.

B) The Western Ghats are continuous and can be crossed only through passes.

C) Anamudi, the highest peak of Peninsular India, is located in the Eastern Ghats.

D) The Eastern Ghats run parallel to the Arabian Sea coast.

Answer: B

Explanation:

- **Correct:** The **Western Ghats** (Sahyadri) are higher ($900-1600$ meters) and continuous. One must use passes like Thal Ghat or Pal Ghat to cross them.
- **Incorrect:** The Eastern Ghats (Option A) are lower and highly dissected by rivers like Godavari and Krishna. Anamudi (Option C) is in the Western Ghats (Kerala). The Eastern Ghats border the Bay of Bengal, not the Arabian Sea (Option D).

Question 6 (Moderate)

The "Deccan Trap" of India is famous for "Regur" soil. How was this region primarily formed?

A) By the accumulation of river silt over millions of years.

B) By the collision of the Indian plate with the Eurasian plate.

C) By intense volcanic fissure eruptions during the Cretaceous period.

D) By the recession of the sea from the western coast.

Answer: C

Explanation:

- **Correct:** The **Deccan Trap** is a large igneous province formed by "flood basalt" eruptions. The weathering of these volcanic rocks produced the fertile black (Regur) soil.
- **Incorrect:** Alluvial soil is formed by river silt (Option A). Plate collision (Option B) formed the Himalayas, not the basaltic plateau.

Question 7 (Difficult)

Which of the following describes the "Kayals" found in the Indian physiography?

A) Glacial lakes found in the Greater Himalayas.

B) Shifting sand dunes in the Thar Desert.

C) Brackish water lagoons/backwaters specifically found on the Malabar Coast.

D) Deep gorges carved by the Brahmaputra in Arunachal Pradesh.

Answer: C

Explanation:

- **Correct: Kayals** are the famous backwaters of Kerala (Malabar Coast), such as the Vembanad Lake. They are used for fishing and the famous Vallam Kali (boat race).
- **Incorrect:** Shifting dunes are called "Dhrian" (Option B). Glacial lakes (Option A) are Tals or Sarovars.

Question 8 (Easy)

Which water body separates the Andaman Islands from the Nicobar Islands?

A) Palk Strait

B) Ten Degree Channel

C) Nine Degree Channel

D) Gulf of Mannar

Answer: B

Explanation:

- **Correct:** The **Ten Degree Channel** is a 150 km wide stretch of water that lies on the 10° N latitude, separating the Andaman group from the Nicobar group.
- **Incorrect:** Palk Strait (Option A) separates India and Sri Lanka. Nine Degree Channel (Option C) separates Minicoy from the main Lakshadweep archipelago.

Question 9 (Moderate)

The "Island Groups of Lakshadweep" are unique in India because:

A) They are of volcanic origin like the Barren Island.

B) They are an extension of the Arakan Yoma mountain range.

C) They are entirely composed of coral deposits (Atolls).

D) They contain the highest peaks of the Indian Ocean.

Answer: C

Explanation:

- **Correct: Lakshadweep** islands are coral islands (Atolls) built on a submerged submarine ridge. They are small and low-lying.
- **Incorrect:** The Andaman and Nicobar islands are of volcanic origin or mountain extensions (Options A and B). Lakshadweep has very low elevation.

Question 10 (Moderate)

In the context of the Northern Plains, what is the difference between "Bhangar" and "Khadar"?

A) Bhangar is new alluvium, while Khadar is old alluvium.

B) Bhangar is found in the deltaic regions, while Khadar is found in the upper reaches.

C) Bhangar is the older alluvium containing "Kankar" (calcareous deposits), while Khadar is the newer, more fertile alluvium.

D) There is no difference; both terms are used for the same soil type.

Answer: C

Explanation:

- **Correct: Bhangar** represents the older silts that lie above the floodplains and contains calcium carbonate nodules (Kankar). **Khadar** is the new silt deposited by annual floods, making it extremely fertile for agriculture.
- **Incorrect:** Option A is the exact opposite of the truth. Khadar is essentially the "younger" soil.

.

Section 1: The Northern Mountains (Himalayas)

1. Which of the following is the correct chronological order of the formation of the Himalayan ranges from North to South?

A) Himadri, Himachal, Shiwaliks

B) Shiwaliks, Himachal, Himadri

C) Himachal, Himadri, Shiwaliks

D) Trans-Himalayas, Shiwaliks, Himadri

Answer: A

Explanation: The Himalayas were formed in phases. The Great Himalayas (Himadri) formed first during the Eocene-Oligocene period, followed by the Lesser Himalayas (Himachal) in the Miocene, and finally the Outer Himalayas (Shiwaliks) in the Pliocene-Pleistocene. Option B is South to North. Option D is mixed.

2. The 'Karewas' of Jammu and Kashmir are famous for the cultivation of Saffron. Geologically, what are Karewas?

A) Glacial moraines

B) Lacustrine deposits

C) Riverine alluvium

D) Volcanic ash

Answer: B

Explanation: Karewas are thick deposits of glacial clay and other materials embedded with moraines. They are lacustrine (lake) deposits formed when the rivers were blocked by the rising Himalayas, creating lakes that later dried up. This soil is rich in minerals ideal for Zafran (Saffron).

3. In which part of the Himalayas is the 'Malana Valley' (often called the oldest democracy) located?

A) Kashmir Himalayas

B) Kumaon Himalayas

C) Himachal Himalayas

D) Arunachal Himalayas

Answer: C

Explanation: Malana is an ancient village in the Kullu district of Himachal Pradesh. It is physically situated within the Himachal (Lesser) Himalayas.

4. The 'Syntaxial Bends' of the Himalayas are found at:

A) Nanga Parbat and Namcha Barwa

B) K2 and Kanchenjunga

C) Mount Everest and Makalu

D) Pir Panjal and Dhauladhar

Answer: A

Explanation: The Himalayas take sharp, hair-pin bends at their eastern and western extremities. The western bend is near Nanga Parbat (Pakistan-administered Kashmir) and the eastern bend is near Namcha Barwa (Tibet/Arunachal border).

5. Which Himalayan range is also known as 'Internal Himalayas'?

A) Shiwaliks

B) Pir Panjal

C) Himadri

D) Zanskar

Answer: C

Explanation: The Great Himalayas or Himadri are called "Internal Himalayas" because they form the innermost core of the mountain system. Shiwaliks are "Outer Himalayas."

6. The Valley of Flowers is situated between which two ranges?

A) Zanskar and Ladakh

B) Greater Himalayas and Zanskar

C) Pir Panjal and Dhauladhar

D) Dhauladhar and Himachal

Answer: B

Explanation: The Valley of Flowers in Uttarakhand lies in the transition zone between the Zanskar range and the Greater Himalayas.

7. Why are the Western Himalayas drier compared to the Eastern Himalayas?

A) They are farther from the sea

B) They have higher altitude

C) They receive less rainfall from the South-West Monsoon

D) All of the above

Answer: C

Explanation: The South-West monsoon enters from the Bay of Bengal and hits the Eastern Himalayas first with high moisture. By the time the winds reach the West, they lose moisture. Also, the Western Himalayas are at a higher latitude.

8. Which pass connects Srinagar to Leh?

A) Nathu La

B) Zoji La

C) Shipki La

D) Jelep La

Answer: B

Explanation: Zoji La is the vital link between the Kashmir Valley and the Ladakh region. Shipki La (C) connects Himachal to Tibet; Nathu La (A) and Jelep La (D) connect Sikkim to Tibet.

9. The 'Duns' (like Dehradun) are characteristic features of which Himalayan zone?

A) Greater Himalayas

B) Trans-Himalayas

C) Between Lesser Himalayas and Shiwaliks

D) Northern Plains

Answer: C

Explanation: Duns are longitudinal structural valleys formed between the Himachal (Lesser) and Shiwalik ranges.

10. Arrange the following peaks from West to East: Nanda Devi, Kanchenjunga, Mount Everest, Nanga Parbat.

A) Nanga Parbat, Nanda Devi, Mount Everest, Kanchenjunga

B) Nanda Devi, Nanga Parbat, Kanchenjunga, Mount Everest

C) Kanchenjunga, Mount Everest, Nanda Devi, Nanga Parbat

D) Nanga Parbat, Mount Everest, Nanda Devi, Kanchenjunga

Answer: A

Explanation: Nanga Parbat is in the far West (J&K), Nanda Devi is in Uttarakhand, Mt. Everest is in Nepal, and Kanchenjunga is on the Sikkim-Nepal border (East).

Section 2: The Northern Plains

11. Which region of the Northern Plains is characterized by the disappearance of rivers underground?

A) Terai

B) Bhangar

C) Bhabar

D) Khadar

Answer: C

Explanation: Bhabar is a narrow belt at the foot of the Shiwaliks composed of pebbles. Rivers flowing down from the mountains disappear into these porous pebble beds.

12. The marshy, humid, and thickly forested belt of Northern Plains is known as:

A) Bhabar

B) Terai

C) Khadar

D) Reh

Answer: B

Explanation: The Terai belt lies south of the Bhabar. Here, the underground streams of Bhabar re-emerge on the surface, creating a damp and marshy area.

13. Which of the following is 'Older Alluvium'?

A) Khadar

B) Bhangar

C) Bhabar

D) Bet

Answer: B

Explanation: Bhangar is the older alluvium that forms the upland plain above the flood levels. Khadar (A) is the newer, fertile alluvium found in floodplains.

14. What are 'Kankar' in the context of Indian soil?

A) Large boulders in Bhabar

B) Calcium carbonate nodules in Bhangar

C) Saline efflorescence in Punjab

D) Deltaic islands in Bengal

Answer: B

Explanation: Bhangar soil often contains calcareous deposits (lime nodules) locally known as Kankar.

15. The 'Doab' between Jhelum and Chenab is called:

A) Bari Doab

B) Bist Doab

C) Chaj Doab

D) Rechna Doab

Answer: C

Explanation: Chaj comes from **Ch**enab and **J**helum. Bari (Beas/Ravi), Bist (Beas/Sutlej), Rechna (Ravi/Chenab).

16. Which part of the plains is most suitable for intensive agriculture?

A) Bhabar

B) Bhangar

C) Khadar

D) Terai

Answer: C

Explanation: Khadar is renewed by floods every year, making it naturally fertile and excellent for intensive farming.

17. 'Chohs' are found in which state?

A) Rajasthan

B) Punjab

C) Assam

D) Bihar

Answer: B

Explanation: Chohs are seasonal streams found in the Hoshiarpur district of Punjab that cause heavy erosion.

18. The 'Rajasthan Plain' was once fertile but turned into a desert primarily due to:

A) Volcanic activity

B) Shift in the course of rivers like Saraswati

C) Excessive rainfall

D) Tectonic uplift

Answer: B

Explanation: Historical and geological evidence suggests the River Saraswati once flowed through this region. Its drying/shifting led to aridity.

19. Which state has the largest share of the Brahmaputra Plain?

A) West Bengal

B) Arunachal Pradesh

C) Assam

D) Meghalaya

Answer: C

Explanation: The Brahmaputra plain is primarily located in the valley of Assam, bounded by the Himalayas and the Meghalaya plateau.

20. The 'Deltaic Plain' is an extension of which soil feature?

A) Bhabar

B) Bhangar

C) Khadar

D) Terai

Answer: C

Explanation: Deltas are formed by the deposition of fresh silt, making them an extension of the Khadar (new alluvium) region.

Section 3: The Peninsular Plateau

21. The Peninsular Plateau of India is part of which ancient landmass?

A) Angaraland

B) Tethys

C) Gondwanaland

D) Laurasia

Answer: C

Explanation: India was part of the supercontinent Gondwanaland, which broke apart during the Mesozoic era.

22. Which river divides the Peninsular Plateau into Central Highlands and Deccan Plateau?

A) Godavari

B) Krishna

C) Narmada

D) Tapi

Answer: C

Explanation: The Narmada river flows through a rift valley; the area north of it is the Central Highlands, and south of it is the Deccan Plateau.

23. The 'Deccan Trap' was formed by:

A) Himalayan orogeny

B) Fissure volcanic eruptions

C) River deposition

D) Glacial activity

Answer: B

Explanation: During the late Cretaceous period, massive volcanic eruptions (basaltic lava) occurred through fissures, creating the step-like topography of the Deccan Traps.

24. Which is the highest peak of the Peninsular Plateau?

A) Doda Betta

B) Anamudi

C) Mahendragiri

D) Guru Shikhar

Answer: B

Explanation: Anamudi (2,695m) in Kerala is the highest peak. Doda Betta (A) is the highest in Nilgiris. Guru Shikhar (D) is the highest in Aravallis.

25. The Western Ghats are locally known as 'Sahyadri' in which state?

A) Kerala

B) Karnataka

C) Maharashtra

D) Tamil Nadu

Answer: C

Explanation: The Western Ghats are called Sahyadris in Maharashtra and Karnataka.

26. Which of the following is a 'Block Mountain'?

A) Aravallis

B) Himalayas

C) Satpura

D) Nilgiris

Answer: C

Explanation: Satpura and Vindhyas are block mountains (horsts) formed due to faulting. Aravallis and Himalayas are fold mountains.

27. The 'Chota Nagpur Plateau' is also known as the:

A) Wheat bowl of India

B) Ruhr of India

C) Garden of India

D) Silicon Plateau

Answer: B

Explanation: Like the Ruhr region in Germany, Chota Nagpur is extremely rich in minerals like coal and iron ore.

28. Which hill station is located in the Palani Hills?

A) Ooty

B) Kodaikanal

C) Munnar

D) Mahabaleshwar

Answer: B

Explanation: Kodaikanal is in the Palani Hills of Tamil Nadu. Ooty (A) is in the Nilgiris.

29. The 'Malwa Plateau' is drained by which of the following rivers?

A) Narmada and Tapi

B) Chambal and Betwa

C) Godavari and Krishna

D) Ganga and Yamuna

Answer: B

Explanation: The Malwa Plateau slopes towards the North, and rivers like Chambal, Sind, and Betwa flow through it to join the Yamuna.

30. Which gap connects the Western Ghats to the Eastern Ghats?

A) Thal Ghat

B) Bhor Ghat

C) Palakkad Gap (Palghat)

D) Moyar Gap

Answer: D

Explanation: The Nilgiri Hills act as the knot where the Western and Eastern Ghats meet. The Moyar Gorge/Gap is a significant physical feature here.

Section 4: Coastal Plains and Islands

31. The 'Konkan Coast' extends between:

A) Goa and Kochi

B) Daman and Goa

C) Goa and Mangalore

D) Kanyakumari and Krishna Delta

Answer: B

Explanation: The Western coastal plain is divided into Konkan (Daman to Goa), Kannada (Goa to Mangalore), and Malabar (Mangalore to Kanyakumari).

32. 'Kayals' (Backwaters) are a unique feature of which coast?

A) Konkan Coast

B) Coromandel Coast

C) Malabar Coast

D) Utkal Coast

Answer: C

Explanation: Kayals are shallow lagoons or backwaters found along the Kerala coast (Malabar Coast), used for fishing and tourism (e.g., Vembanad Lake).

33. The 'Coromandel Coast' receives most of its rainfall during:

A) Summer (SW Monsoon)

B) Winter (Retreating Monsoon)

C) Spring

D) Autumn

Answer: B

Explanation: The Coromandel Coast (Tamil Nadu) lies in the rain shadow of the Western Ghats during summer but gets heavy rain from North-East (Retreating) monsoons in Oct-Nov.

34. Which of the following is a 'Coral Island'?

A) Andaman Islands

B) Nicobar Islands

C) Lakshadweep

D) Majuli

Answer: C

Explanation: Lakshadweep is an archipelago of atolls (coral origin). Andaman and Nicobar are elevated portions of submarine mountains.

35. The 'Ten Degree Channel' separates:

A) India and Sri Lanka

B) Lakshadweep and Maldives

C) Andaman and Nicobar

D) South Andaman and Little Andaman

Answer: C

Explanation: The 10° N latitude passes between the Little Andaman and Car Nicobar islands.

36. Which is the only active volcano in India?

A) Narcondam Island

B) Barren Island

C) Minocoy

D) Pamban

Answer: B

Explanation: Barren Island in the Andaman Sea is the only confirmed active volcano in South Asia. Narcondam is extinct/dormant.

37. The 'Chilika Lake' is situated in which state?

A) Andhra Pradesh

B) Odisha

C) West Bengal

D) Tamil Nadu

Answer: B

Explanation: Chilika is the largest brackish water lagoon in India, located on the Odisha coast.

38. 'Palk Strait' lies between:

A) Andaman and Nicobar

B) Rann of Kutch and Gulf of Khambhat

C) India and Sri Lanka

D) Lakshadweep and Kerala

Answer: C

Explanation: Palk Strait is a water body between the Tamil Nadu state of India and the Jaffna District of Sri Lanka.

39. Which coast is known for the 'Emergence' phenomenon?

A) Western Coast

B) Eastern Coast

C) Konkan Coast

D) Malabar Coast

Answer: B

Explanation: The Eastern coastal plain is an example of an emergent coast (due to tectonic uplift and delta formation), while the Western coast is mostly a submergent coast.

40. Saddle Peak, the highest point of Andaman and Nicobar, is located in:

A) Great Nicobar

B) Little Andaman

C) North Andaman

D) Middle Andaman

Answer: C

Explanation: Saddle Peak (732m) is the highest point of the archipelago, situated in North Andaman.

Section 5: Integrated & Applied Physiography

41. The 'Redcliffe Line' is the boundary between India and:

A) China

B) Pakistan

C) Myanmar

D) Afghanistan

Answer: B

Explanation: It was the boundary line determined by Cyril Radcliffe during the partition in 1947.

42. Which physical feature of India acts as a 'Water Divide' between the Indus and Ganga river systems?

A) Aravallis

/ B) Himalayas

C) Ambala Ridge

D) Vindhyas

Answer: C

Explanation: The upland area near Ambala acts as a water divide; water to the west flows into the Indus and to the east into the Ganga.

43. The 'Patkai Bum' hills form the boundary between:

A) India and China

B) India and Myanmar

C) India and Bhutan

D) India and Bangladesh

Answer: B

Explanation: Patkai Bum, along with Naga Hills and Lushai Hills, forms the Purvanchal range acting as a border with Myanmar.

44. Which state has the longest coastline in India?

A) Andhra Pradesh

B) Tamil Nadu

C) Gujarat

D) Maharashtra

Answer: C

Explanation: Gujarat has a coastline of approximately 1,600 km, the longest due to its numerous indentations and gulfs.

45. The 'Bundelkhand' region is famous for which type of topography?

A) Desert topography

B) Karst topography

C) Badland topography

D) Glacial topography

Answer: C

Explanation: Bundelkhand and the Chambal basin are characterized by extensive ravines and gully erosion, known as badland topography.

46. Which state is known as the 'Molasses Basin'?

A) Assam

B) Mizoram

C) Manipur

D) Nagaland

Answer: B

Explanation: Mizoram is known as the 'Molasses Basin' because it is made up of soft, unconsolidated deposits.

47. 'Loktak Lake' is famous for 'Phumdis'. In which state is it located?

A) Meghalaya

B) Manipur

C) Tripura

D) Mizoram

Answer: B

Explanation: Phumdis are floating islands of vegetation and soil. Loktak Lake in Manipur is the only floating national park (Keibul Lamjao) in the world.

48. Which is the largest district in India by area?

A) Leh

B) Kutch

C) Jaisalmer

D) Bikaner

Answer: B

Explanation: Kutch (Gujarat) is the largest district, followed by Leh.

49. The 'Malabar Coast' starts from which river mouth?

A) Tapi

B) Netravati

C) Periyar

D) Krishna

Answer: B

Explanation: Geographically, the Malabar coast begins south of the Netravati river (Mangalore) and extends to Kanyakumari.

50. Which Indian state shares its borders with the maximum number of other states?

A) Madhya Pradesh

B) Uttar Pradesh

C) Assam

D) Chhattisgarh

Answer: B

Explanation: Uttar Pradesh shares borders with 8 states (Uttarakhand, HP, Haryana, Rajasthan, MP, Chhattisgarh, Jharkhand, Bihar) and 1 Union Territory (Delhi).

Statement based questions.

Section 1: The Northern Mountains (Himalayas)

1. Consider the following statements regarding the Himalayas:

Statement 1: They are geographically the youngest and structurally fold mountains.

Statement 2: The Himalayas take a sharp southward bend called the 'Syntaxial Bend' at both their eastern and western ends.

Statement 3: The Great Himalayas are characterized by an asymmetrical fold with a core made of granite.

A) Only 1 and 2 are correct

B) Only 2 and 3 are correct

C) Only 1 and 3 are correct

D) All 1, 2, and 3 are correct

Answer: D

Explanation:

- **Statement 1 is correct:** They were formed by the collision of the Indian and Eurasian plates, making them young fold mountains.
- **Statement 2 is correct:** These bends occur at Nanga Parbat in the west and Namcha Barwa in the east.
- **Statement 3 is correct:** The fold is asymmetrical, and the core of the Great Himalayas is composed of Archean rocks, primarily granite.

2. Regarding the Trans-Himalayas:

Statement 1: They lie to the north of the Great Himalayan range.

Statement 2: The Karakoram, Ladakh, and Zanskar ranges are part of this region.

Statement 3: K2 (Godwin-Austen), the second highest peak in the world, is located in the Zanskar range.

A) Only 1 and 2 are correct

B) Only 2 and 3 are correct

C) Only 1 and 3 are correct

D) All 1, 2, and 3 are correct

Answer: A

Explanation:

- **Statement 1 and 2 are correct:** These ranges constitute the Trans-Himalayas, which are older than the Great Himalayas.
- **Statement 3 is incorrect:** K2 is located in the **Karakoram Range**, not the Zanskar range.

3. Consider the following statements about 'Karewas':

Statement 1: They are thick lacustrine (lake) deposits of glacial clay and moraines.

Statement 2: They are primarily found in the Himachal (Lesser) Himalayas of Uttarakhand.

Statement 3: They are globally renowned for the cultivation of 'Zafran' (Saffron).

A) Only 1 and 2 are correct

B) Only 2 and 3 are correct

C) Only 1 and 3 are correct

D) All 1, 2, and 3 are correct

Answer: C

Explanation:

- **Statement 1 and 3 are correct:** Karewas are lake deposits in the Kashmir Valley essential for high-quality saffron.
- **Statement 2 is incorrect:** Karewas are found in the **Kashmir Himalayas**, not the Uttarakhand region.

4. Regarding the Shiwalik Range:

Statement 1: It is the southernmost and outermost range of the Himalayas.

Statement 2: It is composed of unconsolidated sediments brought down by rivers.

Statement 3: This range is continuous from the Indus River to the Brahmaputra without any breaks.

A) Only 1 and 2 are correct

B) Only 1 and 3 are correct

C) Only 2 and 3 are correct

D) All 1, 2, and 3 are correct

Answer: A

Explanation:

- **Statement 1 and 2 are correct:** Shiwaliks are the youngest part of the Himalayas made of loose debris.
- **Statement 3 is incorrect:** The Shiwaliks disappear or merge with the Lesser Himalayas in the **eastern part** (near the Teesta River) due to narrowness.

5. Consider the following about the regional divisions of the Himalayas:

Statement 1: The Nepal Himalayas lie between the Kali and Teesta rivers.

Statement 2: The Kumaon Himalayas are situated between the Satluj and Kali rivers.

Statement 3: The Punjab Himalayas are located between the Indus and Satluj rivers.

A) Only 1 and 2

B) Only 2 and 3

C) Only 1 and 3

D) All 1, 2, and 3 are correct

Answer: D

Explanation: These are the traditional longitudinal divisions based on river valleys proposed by Sidney Burrard. All pairings are geographically accurate.

Section 2: The Northern Plains

6. Consider the statements regarding the Bhabar region:

Statement 1: It is a narrow belt parallel to the Shiwalik foothills.

Statement 2: Rivers and streams disappear in this region due to high porosity.

Statement 3: It is the most fertile region of the Northern Plains for agriculture.

A) Only 1 and 2 are correct

B) Only 2 and 3 are correct

C) Only 1 and 3 are correct

D) All 1, 2, and 3 are correct

Answer: A

Explanation:

- **Statement 1 and 2 are correct:** The Bhabar is a pebble-studded zone where water flows underground.
- **Statement 3 is incorrect:** Due to the rocky and porous nature, it is **not suitable** for general agriculture.

7. Regarding the Terai region:

Statement 1: It lies to the south of the Bhabar belt.

Statement 2: It is a marshy, damp, and thickly forested area.

Statement 3: Most of the Terai in India has been cleared for agriculture, especially in Punjab and Uttar Pradesh.

A) Only 1 and 2 are correct

B) Only 2 and 3 are correct

C) Only 1 and 3 are correct

D) All 1, 2, and 3 are correct

Answer: D

Explanation: All statements are correct. The Terai is where streams re-emerge, creating wetlands. Following partition, large parts were cleared to settle refugees and for intensive farming.

8. Consider the following statements about 'Bhangar' and 'Khadar':

Statement 1: Bhangar represents the older alluvium of the plains.

Statement 2: Khadar is the newer alluvium that is renewed by floods almost every year.

Statement 3: Bhangar is more fertile than Khadar due to the presence of 'Kankar' (calcium deposits).

A) Only 1 and 2 are correct

B) Only 2 and 3 are correct

C) Only 1 and 3 are correct

D) All 1, 2, and 3 are correct

Answer: A

Explanation:

- **Statement 1 and 2 are correct:** These define the age-based classification of plains.
- **Statement 3 is incorrect: Khadar is more fertile** than Bhangar because it is fresh silt. Kankar in Bhangar actually makes it less suitable for some crops.

9. Regarding the Punjab Plains:

Statement 1: They are primarily formed by the Indus and its tributaries.

Statement 2: This region is dominated by 'Doabs' (land between two rivers).

Statement 3: The 'Bari Doab' lies between the Beas and Ravi rivers.

A) Only 1 and 2 are correct

B) Only 2 and 3 are correct

C) Only 1 and 3 are correct

D) All 1, 2, and 3 are correct

Answer: D

Explanation: All statements are correct. The Punjab plains (both in India and Pakistan) are classic examples of doab-driven landscapes.

10. Consider the following about the Ganga Plains:

Statement 1: It extends between the Ghaggar and Teesta rivers.

Statement 2: The 'Rohilkhand Plain' is a part of the Upper Ganga Plain.

Statement 3: The deltaic part of the Ganga plain is known as the 'Sunderbans'.

A) Only 1 and 2 are correct

B) Only 2 and 3 are correct

C) Only 1 and 3 are correct

D) All 1, 2, and 3 are correct

Answer: D

Explanation: All statements are correct. The Ganga plain is the largest unit of the Northern Plains, characterized by regional variations like Rohilkhand, Awadh, and Magadh.

Section 3: The Peninsular Plateau

11. Regarding the Peninsular Plateau:

Statement 1: It is one of the oldest and most stable landmasses on Earth.

Statement 2: It is primarily composed of old crystalline, igneous, and metamorphic rocks.

Statement 3: It has a general slope from West to East.

A) Only 1 and 2 are correct

B) Only 2 and 3 are correct

C) Only 1 and 3 are correct

D) All 1, 2, and 3 are correct

Answer: D

Explanation: All statements are correct. The eastward flow of major rivers like Godavari and Krishna proves the eastward tilt of the plateau.

12. Consider the statements about the Deccan Trap:

Statement 1: It was formed by fissure volcanic eruptions during the Cretaceous period.

Statement 2: It is characterized by step-like topography made of basaltic lava.

Statement 3: The region is famous for 'Regur' or Black Soil, ideal for cotton.

A) Only 1 and 2

B) Only 2 and 3

C) Only 1 and 3

D) All 1, 2, and 3 are correct

Answer: D

Explanation: All statements are correct. The Deccan Trap covers much of Maharashtra and parts of Gujarat and MP.

13. Regarding the Western Ghats:

Statement 1: They are higher and more continuous than the Eastern Ghats.

Statement 2: Their height increases from South to North.

Statement 3: They act as a water divide for many peninsular rivers.

A) Only 1 and 3 are correct

B) Only 1 and 2 are correct

C) Only 2 and 3 are correct

D) All 1, 2, and 3 are correct

Answer: A

Explanation:

- **Statement 1 and 3 are correct:** They are an unbroken wall (crossable only through passes) and originate major rivers.
- **Statement 2 is incorrect:** Their height **increases from North to South**. Anamudi (highest peak) is in the south.

14. Consider the following about the Eastern Ghats:

Statement 1: They are discontinuous and irregular due to erosion by rivers flowing into the Bay of Bengal.

Statement 2: Mahendragiri is one of the highest peaks of the Eastern Ghats.

Statement 3: They meet the Western Ghats at the Nilgiri Hills.

A) Only 1 and 2 are correct

B) Only 2 and 3 are correct

C) Only 1 and 3 are correct

D) All 1, 2, and 3 are correct

Answer: D

Explanation: All statements are correct. The Eastern Ghats are much lower and fragmented compared to the West.

15. Regarding the Central Highlands:

Statement 1: They lie to the north of the Narmada river.

Statement 2: They include the Malwa Plateau and the Chota Nagpur Plateau.

Statement 3: Rivers like Chambal and Ken flow from Southwest to Northeast in this region.

A) Only 1 and 2 are correct

B) Only 1 and 3 are correct

C) Only 2 and 3 are correct

D) All 1, 2, and 3 are correct

Answer: D

Explanation: All statements are correct. The North-East flow of rivers indicates the slope of the Central Highlands towards the Ganga plain.

Section 4: The Coastal Plains

16. Consider the statements about the Western Coastal Plain:

Statement 1: It is a narrow strip of land between the Western Ghats and the Arabian Sea.

Statement 2: It is divided into Konkan, Kannada, and Malabar coasts.

Statement 3: It is an example of an 'Emergent' coastline.

A) Only 1 and 2 are correct

B) Only 2 and 3 are correct

C) Only 1 and 3 are correct

D) All 1, 2, and 3 are correct

Answer: A

Explanation:

- **Statement 1 and 2 are correct:** These describe the location and divisions.
- **Statement 3 is incorrect:** The Western Coast is primarily a **Submergent** coast (except for the Kerala part).

17. Regarding the Eastern Coastal Plain:

Statement 1: It is wider and more leveled than the Western Coastal Plain.

Statement 2: It features large deltas formed by rivers like the Mahanadi and Godavari.

Statement 3: It is known as the Coromandel Coast in its northern part.

A) Only 1 and 2 are correct

B) Only 2 and 3 are correct

C) Only 1 and 3 are correct

D) All 1, 2, and 3 are correct

Answer: A

Explanation:

- **Statement 1 and 2 are correct:** It is an emergent coast with broad deltas.
- **Statement 3 is incorrect:** The Coromandel Coast is the **southern part** (Tamil Nadu); the northern part is called the Northern Circars.

18. Consider the following about 'Kayals':

Statement 1: They are brackish water lagoons found along the Malabar Coast.

Statement 2: They are used for fishing and inland navigation.

Statement 3: The Vembanad Lake in Kerala is the largest Kayal in India.

A) Only 1 and 2 are correct

B) Only 2 and 3 are correct

C) Only 1 and 3 are correct

D) All 1, 2, and 3 are correct

Answer: D

Explanation: All statements are correct. Kayals are a unique physiographic feature of the Kerala coast.

Section 5: The Islands

19. Regarding the Andaman and Nicobar Islands:

Statement 1: They are an elevated portion of submarine mountains (Arakan Yoma extension).

Statement 2: The Ten Degree Channel separates the Andaman group from the Nicobar group.

Statement 3: Saddle Peak is the highest point in the entire archipelago.

A) Only 1 and 2 are correct

B) Only 2 and 3 are correct

C) Only 1 and 3 are correct

D) All 1, 2, and 3 are correct

Answer: D

Explanation: All statements are correct. The islands are strategically located and of volcanic/tectonic origin.

20. Consider the statements about Lakshadweep:

Statement 1: It is a group of islands of coral origin (Atolls).

Statement 2: It is located in the Bay of Bengal.

Statement 3: Kavaratti is the administrative headquarters of Lakshadweep.

A) Only 1 and 2 are correct

B) Only 1 and 3 are correct

C) Only 2 and 3 are correct

D) All 1, 2, and 3 are correct

Answer: B

Explanation:

- **Statement 1 and 3 are correct:** They are atolls in the Arabian Sea.
- **Statement 2 is incorrect:** Lakshadweep is in the **Arabian Sea**, not the Bay of Bengal.

Section 6: Advanced & Integrative Physiography

21. Consider the following statements about the 'Indian Desert' (Thar):

Statement 1: It lies to the northwest of the Aravalli hills.

Statement 2: It receives very low rainfall, below 150 mm per year.

Statement 3: The Luni is the only significant river in this region.

A) Only 1 and 2 are correct

B) Only 1 and 3 are correct

C) Only 2 and 3 are correct

D) All 1, 2, and 3 are correct

Answer: D

Explanation: All statements are correct. The Aravallis act as a barrier, contributing to the aridity of the Thar desert.

22. Regarding the 'Meghalaya Plateau':

Statement 1: It is a physical extension of the Peninsular Plateau.

Statement 2: It is separated from the Chota Nagpur plateau by the Malda Fault.

Statement 3: It includes the Garo, Khasi, and Jaintia hills.

A) Only 1 and 2 are correct

B) Only 2 and 3 are correct

C) Only 1 and 3 are correct

D) All 1, 2, and 3 are correct

Answer: D

Explanation: All statements are correct. Though it looks like part of the North-East mountains, it is geologically part of the ancient Peninsular block.

23. Consider the following about the 'Aravalli Range':

Statement 1: It is one of the oldest fold mountain systems in the world.

Statement 2: It extends from Gujarat to Delhi.

Statement 3: Guru Shikhar is the highest peak of this range.

A) Only 1 and 2 are correct

B) Only 2 and 3 are correct

C) Only 1 and 3 are correct

D) All 1, 2, and 3 are correct

Answer: D

Explanation: All statements are correct. The Aravallis are now highly eroded residual mountains (relict mountains).

24. Regarding the 'Vindhya and Satpura' ranges:

Statement 1: The Vindhyas lie to the north of the Narmada river.

Statement 2: The Satpura range lies between the Narmada and Tapi rivers.

Statement 3: Both are primarily block mountains formed by faulting.

A) Only 1 and 2 are correct

B) Only 2 and 3 are correct

C) Only 1 and 3 are correct

D) All 1, 2, and 3 are correct

Answer: D

Explanation: All statements are correct. The Narmada and Tapi flow through rift valleys created by these ranges.

25. Consider the statements about the 'Purvanchal' hills:

Statement 1: They are the eastern extension of the Himalayas.

Statement 2: They are composed of strong sandstones which are sedimentary rocks.

Statement 3: They include the Patkai, Naga, and Mizo hills.

A) Only 1 and 2 are correct

B) Only 2 and 3 are correct

C) Only 1 and 3 are correct

D) All 1, 2, and 3 are correct

Answer: D

Explanation: All statements are correct. They run along the border between India and Myanmar.
